1. Dashboard

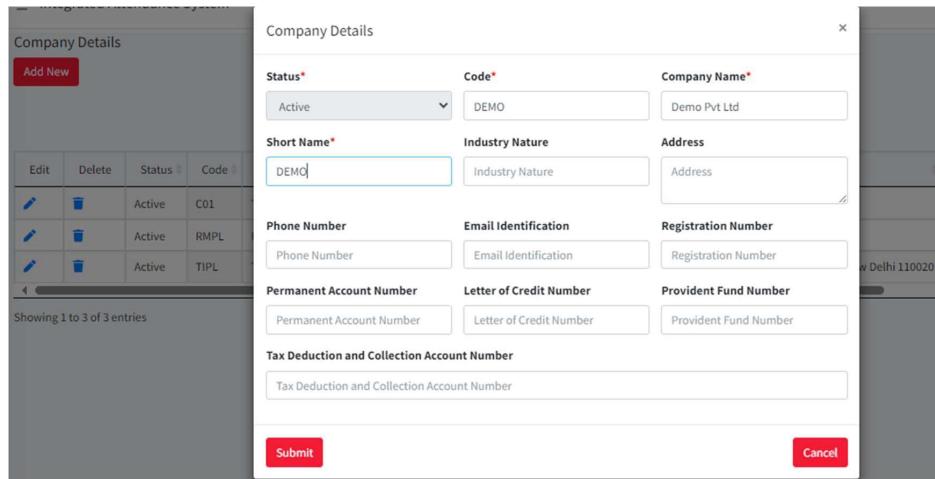

A dashboard provides a comprehensive display of active statuses, including the number of individuals present, absent, on leave, holidays, and other relevant categories, facilitating quick and informed decision-making.

2. Master

2.1. Company

- Define the necessary fields such as company name, address, contact information, industry, and any other relevant details.
- Regularly update the company master as needed, especially when new companies are added or existing ones are modified.

The form is titled "Company Details". It includes fields for:

- Status*: Active (dropdown)
- Code*: DEMO (text input)
- Company Name*: Demo Pvt Ltd (text input)
- Short Name*: DEMO (text input)
- Industry Nature (text input)
- Address (text input)
- Phone Number (text input)
- Email Identification (text input)
- Registration Number (text input)
- Permanent Account Number (text input)
- Letter of Credit Number (text input)
- Provident Fund Number (text input)
- Tax Deduction and Collection Account Number (text input)

Buttons at the bottom include "Submit" and "Cancel".

2.2. Location Master

- Establish a location master database for assigning employees to specific locations, ensuring efficient organization and management of workforce placement.
- Regularly update the location master as needed, especially when new location is added or existing ones are modified.

Location Details

Code*	Name*	Company*
NDLS	New Delhi	BMPL
City	State	Country
Delhi	Delhi	India
Postal Code	Contact EmailID	
110022	abdd@gmail.com	
Address1	Address2	
New Delhi	New Delhi	

Submit **Cancel**

2.3. Department Master

- Create a department master database with essential department details for future employee assignments and organizational management.
- Regularly update the department master as needed, especially when new department are added or existing ones are modified.

2.5. Category Master

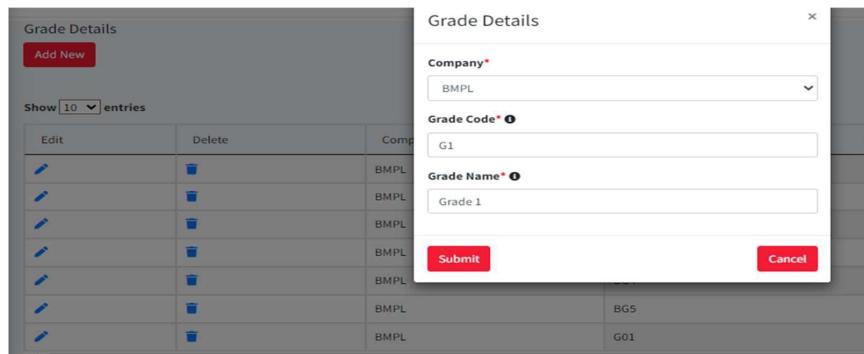

- Define the necessary fields such as category name, description, maximum allowed late instances, and corresponding leave deduction. Create a category master database or table within your HR system with columns corresponding to these fields.
- Regularly review and update the category master as needed to reflect any changes in company policies or requirements.

The screenshot shows two side-by-side windows. On the left is a list view titled 'Category Details' with a red 'Add New' button. It shows 7 entries with columns for Edit, Delete, Company (BMPL), and Code (AB1, BC1, BC2, BC3, BC4, BC5, CO1). On the right is a detailed 'Category Details' form. It includes fields for Company (BMPL), Code (CAT), Name (Category), and a checkbox for 'Is Late Verification'. It also has sections for 'Late Days' (1.00), 'Max Late Duration' (3.00), 'Deduct From' (Leave), and 'First Leave Code' (BM1 - Added by BMPL Leave Master1). There are also 'Every Interval' and 'Max Late Duration' checkboxes. The right window has a close button (X) in the top right corner.

2.6. Grade Master

- Input the information for each grade, ensuring accuracy and completeness.
- Regularly update the grade master as needed, especially when new grades are introduced or existing ones are modified.

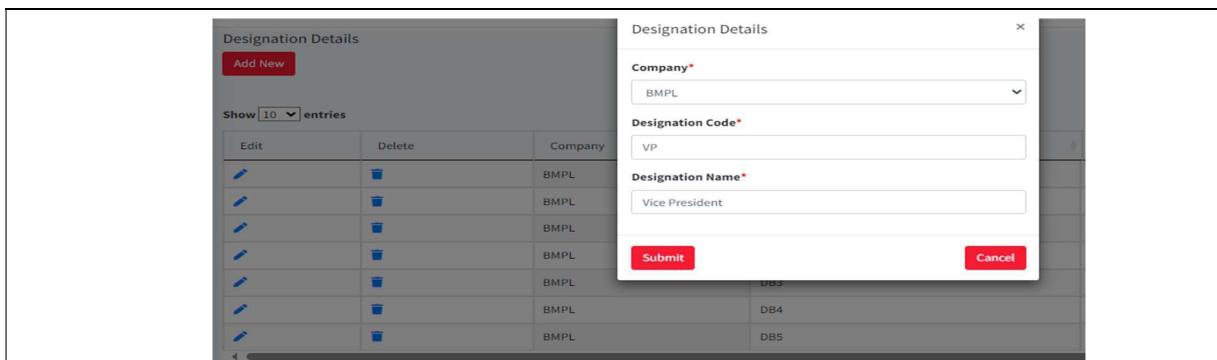

The screenshot shows two side-by-side windows. On the left is a list view titled 'Grade Details' with a red 'Add New' button. It shows 7 entries with columns for Edit, Delete, and Company (BMPL). On the right is a detailed 'Grade Details' form. It includes fields for Company (BMPL), Grade Code (G1), and Grade Name (Grade 1). It also has 'Submit' and 'Cancel' buttons. The right window has a close button (X) in the top right corner.

2.7. Designation Master

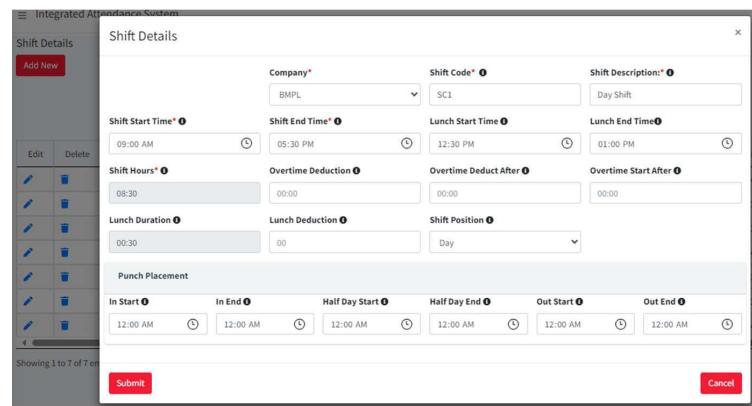

- such as designation name, description, department affiliation, responsibilities, and any other relevant details.
- Regularly update the designation master as needed, especially when new designations are introduced or existing ones are modified.

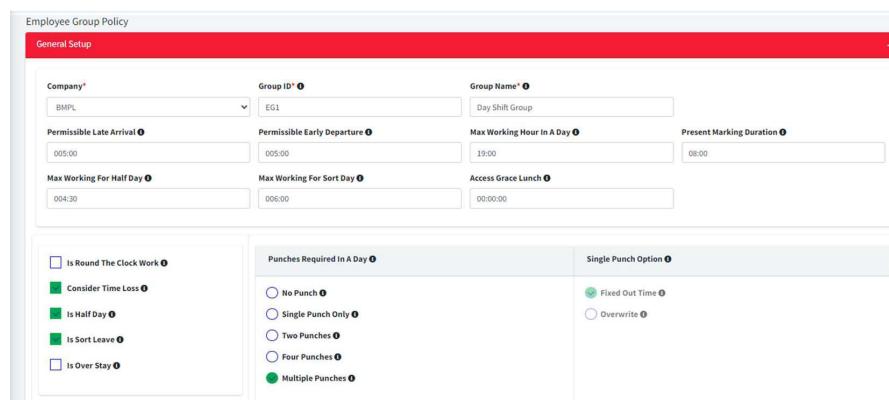

2.8. Shift Master

- Define the necessary fields such as shift name, start time, end time, break times, duration, and any other relevant details. Consider additional features such as shift rotation patterns, allowances, or overtime policies if applicable.
- Regularly update the shift master as needed, especially when new shifts are introduced or existing ones are modified.

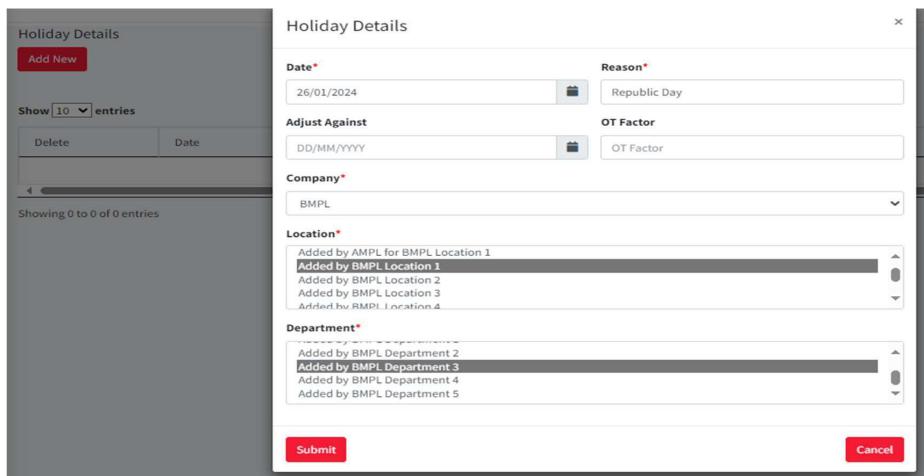

2.9. Employee Group Policy

- Define the necessary fields such as group policy name, description, eligibility criteria, benefits, restrictions, and any other relevant details.
- Regularly update the Employee Group Policy Master as needed, especially when new policies are introduced or existing ones are modified.

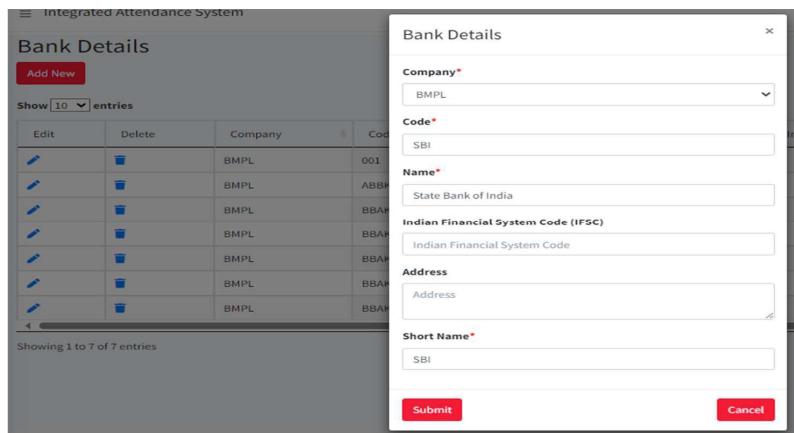

2.10. Holiday Master

- Define the necessary fields such as holiday name, date, description, and any other relevant details. Consider various types of holidays such as national holidays, regional holidays, and company-specific holidays.
- Regularly update the Holiday Master as needed, especially when new holidays are introduced or existing ones are modified.

2.11. Bank Master

- Define the necessary fields such as bank name, branch, address, contact information, and any other relevant details.
- Regularly update the Bank Master as needed, especially when new banks are added or existing ones are modified.

2.12. Employee Master

- Define the necessary fields such as employee ID, name, contact details, address, date of birth, hire date, department, position, salary, and any other relevant details. Consider additional features such as employee photos, emergency contacts, qualifications, certifications, and performance evaluations if applicable.
- Regularly update the Employee Master as needed, especially when new employees are hired or existing ones have changes in their details.

3. Employee Self Service

3.1. Attendance

Attendance details typically encompass information regarding the presence or absence of individuals over a specified period. This includes data on days worked, days absent, reasons for absence (such as vacation, sick leave, or other types of leave), late arrivals, early departures, and any other relevant attendance-related information. These details are often organized chronologically or categorized by individual employees, allowing for easy tracking and management of attendance records.

Attendance

Employee Code		From Date	To Date	View							
BMPPL12345601	BMPPL12345601	01/02/2024	29/02/2024								
Present	6.00	Absent	18.00	Leave	0.00	Week Off	0	Holiday	0	Late	0
Show [31] entries

12/02/2024	Monday	BS1			A	00:00					

3.2. Attendance Request

An attendance request is made to correct errors or discrepancies in attendance records, such as miss punches or incorrect entries, by informing the appropriate authority and providing necessary details for rectification.

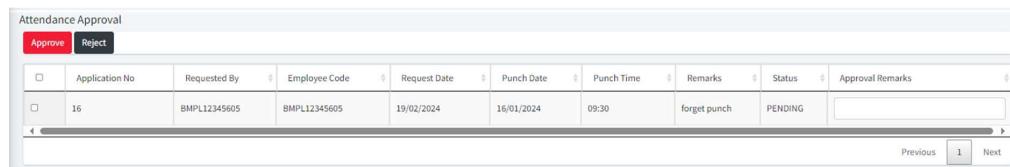

Attendance Request

Employee Information								
Employee Code	Employee Name	Company						
BMPPL12345605	BMPPL12345605	BMPPL						
Department	Enrollment Code	SSN						
Added by BMPPL Department 1	BMPPL12345605	BMPPL_BMPPL12345605						
Attendance Date	Punch Time	Reason						
		Remarks						
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>								
Request Details

16	BMPPL12345605	BMPPL12345605	19/02/2024	16/01/2024	09:30	forget punch	PENDING	

3.3. Attendance Approval

Attendance approval involves the process by which supervisors or managers review and authorize employee attendance records, including requests for time off, overtime, or any other attendance-related adjustments.

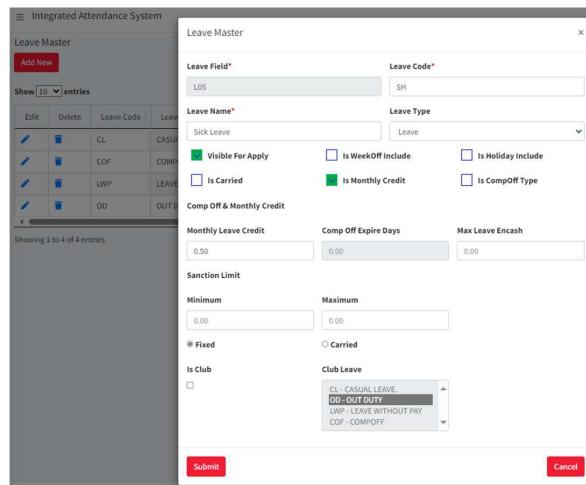

The screenshot shows a table titled 'Attendance Approval' with two buttons at the top: 'Approve' (highlighted in red) and 'Reject'. The table has columns for Application No, Requested By, Employee Code, Request Date, Punch Date, Punch Time, Remarks, Status, and Approval Remarks. A single row is selected, showing Application No: 16, Requested By: BMPL12345605, Employee Code: BMPL12345605, Request Date: 19/02/2024, Punch Date: 16/01/2024, Punch Time: 09:30, Remarks: forget punch, Status: PENDING, and Approval Remarks: (empty). Navigation buttons at the bottom right include 'Previous', '1', and 'Next'.

4. Leave Management

4.1. Leave Master

- Define the necessary fields such as leave type, description, accrual rate, maximum balance, eligibility criteria, and any other relevant details. Consider various types of leave such as vacation leave, sick leave, maternity/paternity leave, and special leave categories.
- Regularly update the Leave Master as needed, especially when new leave types are introduced or existing ones are modified.

The screenshot shows the 'Leave Master' configuration window. It includes fields for Leave Field (L05), Leave Code (SH), Leave Name (Sick Leave), Leave Type (Leave), and various checkboxes for visibility, weekly/holiday inclusion, monthly credit, and comp-off type. It also shows monthly leave credit (0.50), comp-off expire days (0.00), and max leave encash (0.00). Under 'Sanction Limit', it shows minimum and maximum values (both 0.00). A 'Club Leave' dropdown menu lists leave types: CL - CASUAL LEAVE, LD - LEAVE DUTY, LWP - LEAVE WITHOUT PAY, COF - COMPOFF. Buttons for 'Submit' and 'Cancel' are at the bottom.

4.2. Leave Accrual

- Determine the leave accrual policy: Define the rules for how leave accrues, such as the accrual eligibility criteria, and any maximum accrual limits. Decide the frequency at which leave accruals will be calculated (e.g., monthly, annually).
- Set up a system, whether manual or automated, to calculate leave accruals for each eligible employee based on the established policy and accrual period.

Leave Accrual

Employee Information

Employee Code	Sag01	Enrollment Code	Sag01	Company	TIMEWATCH INFOCOM PVT LTD
Department	Admin	Category	CAT1	Leave Year	2024

Leave Details

CASUAL LEAVE.	1	OUT DUTY	0
LEAVE WITHOUT PAY	0	COMP OFF	0

Buttons: Apply | Cancel

4.3. Leave Application

A leave application is a formal request made by an employee to their employer or supervisor to request time off from work for a specific period. It typically includes details such as the dates of the requested leave, the reason for the leave (e.g., vacation, illness, personal reasons), and any relevant documentation or approvals required.

Leave Application

Employee Information

Leave Duration	Leave Balance		Leave Remarks		
<input checked="" type="radio"/> Full Day <input type="radio"/> First Half <input type="radio"/> Second Half	5		Leave Remarks		

Buttons: Apply

4.4. Leave Approval

Leave approval is the process by which a supervisor or manager reviews and decides whether to approve or deny an employee's request for time off from work. This process typically involves assessing factors such as staffing needs, workload, and the availability of other employees before making a decision.

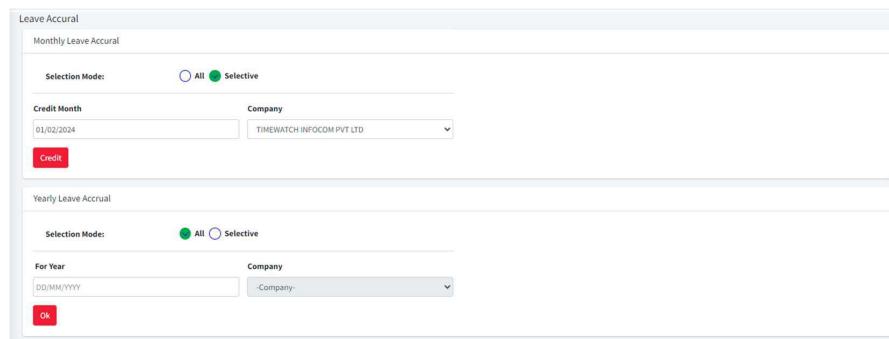

Leave Approval

<input type="checkbox"/>	Serial Number	Request Date	Application No	Employee Code	Name	Leave Code	Leave From	Leave To	Remarks	Duration	Days	Approver Remarks
<input type="checkbox"/>	350	09/01/2024	420	TIPL082	LALITH	CL	18/12/2023	18/12/2023	PERSONAL LEAVE	Full Day	1	
<input type="checkbox"/>	365	20/02/2024	441	TIPL127	AMIT PATEL	CL	22/02/2024	23/02/2024	CL	Full Day	2	

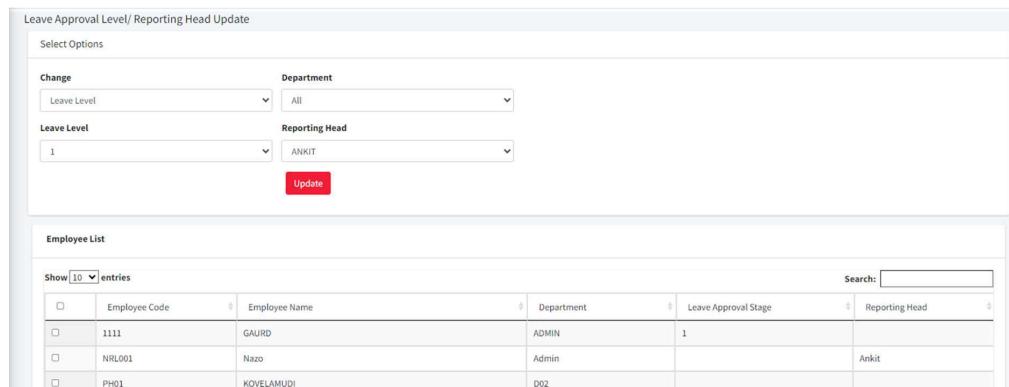

4.5. Auto Leave Accrual/Leave Credit

- a) Set up the accrual rules and parameters within the software system. This includes specifying the accrual rate, accrual period (e.g., monthly, annually), and any other relevant settings.
- b) Configure the software to automatically calculate leave accrual for each eligible employee based on the defined rules and attendance data. The system should handle accrual calculations accurately and in real-time.

4.6. Leave Level Update

- a) Determine the hierarchical levels through which leave requests must pass for approval. This typically includes immediate supervisors, department heads, and HR managers.
- b) Set up an automated approval workflow within your leave management system or HR software. Define the sequence of approval levels and specify the criteria for each level's approval authority.

Show <input type="button" value="10"/> entries	Employee List					Search: <input type="text"/>
	Employee Code	Employee Name	Department	Leave Approval Stage	Reporting Head	
<input type="checkbox"/>	1111	GAURD	ADMIN	1	Ankit	
<input type="checkbox"/>	NRLO01	Nazo	Admin		Ankit	
<input type="checkbox"/>	PH01	KOVELAMUDI	D02			

5. Operations

5.1. Data Process (Roster)

- a) Data Collection: Gather information about employee availability, preferences, shift requirements, and any other relevant factors.
- b) Roster Creation: Use a roster management tool or software to create employee schedules. Input employee data, including names, positions, availability, and any scheduling constraints.
- c) Automated Scheduling: Utilize automated scheduling features to generate optimal employee rosters based on predefined criteria such as staffing requirements, skill levels, and labor laws.
- d) Shift Allocation: Assign shifts to employees based on their availability, skills, and preferences while ensuring coverage for all required shifts.

5.2. Upload

Employee Upload

- Prepare Data: Collect employee data in a specific format, often as a spreadsheet (e.g., Excel), ensuring that it includes all necessary fields such as employee ID, name, contact information, department, position, etc.
- Select the prepared data file from your computer and upload it to the bulk uploader tool. The software will typically provide instructions on the required format and fields.
- The software may perform data validation checks to ensure that the uploaded data is accurate and meets any required formatting standards. Errors or inconsistencies may be flagged for review and correction.

Punch Upload

- Prepare Punch Data: Collect employee punch data in a specific format, often as a spreadsheet (e.g., Excel or CSV). The data should include details such as employee ID, punch date and time, punch type (e.g., clock in, clock out), and any other relevant information.
- Upload Data File: Select the prepared punch data file from your computer and upload it to the bulk uploader tool. The system will typically provide instructions on the required format and fields.
- Validate Data: The system may perform data validation checks to ensure that the uploaded data is accurate and meets any required formatting standards. Errors or inconsistencies may be flagged for review and correction.

6.2. Real time Log:

This interface provides real-time employee attendance details, including punch-in and punch-out records, along with the device used for each punch.

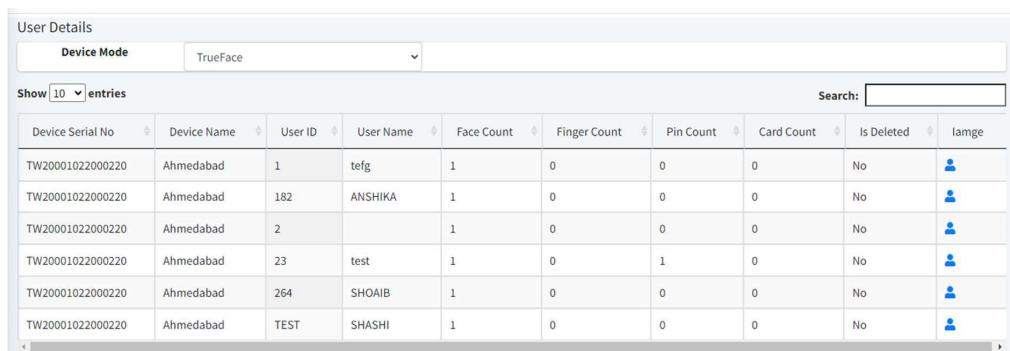

6.3. User Punch Detail

The interface empowers administrators to access employee punch details efficiently, with advanced filtering capabilities such as specifying date ranges, punch types, and the option to view punches with or without associated images, ensuring comprehensive oversight of attendance records.

6.4. User Details

The interface allows administrators to access employee details, categorizing them by mode of authentication used (Face/Finger/Pin and Card). Additionally, if an employee punch using facial recognition, the interface provides the option to view accompanying images. Administrators can further refine their search using filters to view punch details specific to the device mode chosen, enhancing their ability to manage attendance effectively.

6.5. Template Manage

The template management feature streamlines employee enrolment across devices by transferring details seamlessly, eliminating repetitive enrolment and ensuring consistency. It enables bulk transfer of user data, enhancing efficiency and scalability.

6.7. iDMS Setting

In an Integrated Data Management System (IDMS), configuring settings for automatic processing streamlines data management tasks. Some settings that can be configured for automatic processing include:

- No. of Commands at a Time: Setting the maximum number of commands that can be processed simultaneously to optimize system performance.
- Remove Photo Days: Automatically removing photos associated with user profiles after a specified number of days to manage storage and privacy.
- Duplicate Check Minute: Configuring the interval at which the system automatically checks for duplicate records or entries to maintain data accuracy.
- Present Card Number Length: Specifying the required length for card numbers used for employee attendance or identification to ensure consistency and compatibility with system requirements.

Configuring these settings for automatic processing enhances efficiency, reduces manual effort, and ensures consistent data management within the IDMS.

iDMS Setting

No Of Commands At A Time <input type="text" value="50"/>	Photo Remove Days <input type="text" value="0"/>	Duplicate Check Minute <input type="text" value="0"/>
<input type="checkbox"/> Auto Sync	<input type="checkbox"/> Allow Seconds	Auto Download Logs Time <input type="text" value="01:00"/>
<input type="checkbox"/> Auto Download Logs	<input type="checkbox"/> Allow Visitor	<input checked="" type="checkbox"/> Auto Process Attendance
<input type="checkbox"/> Save Slave Device User Data	Present Card Number Length <input type="text" value="12"/>	
<input type="button" value="Save"/>		

6.8. Remote Enrollment

The interface facilitates convenient enrollment of users into designated devices remotely via cloud integration, eliminating the need for physical proximity to the device. This streamlined process enables administrators to enroll employees efficiently and securely from anywhere with internet access, enhancing flexibility and convenience in managing user access and authentication.

Remote Enrollment

6.9. Device Group

This interface enables the creation of device groups, each comprising various devices within a single group. Administrators can assign these groups to users, allowing them to punch in from different locations and departments based on the devices included in their assigned group. This functionality streamlines attendance tracking and access control, ensuring users can conveniently record their attendance from diverse locations while maintaining organizational structure and departmental distinctions.

Integrated Attendance System

		<input type="button" value="Submit"/> <input type="button" value="Cancel"/>	<input type="button" value="Search"/>
Showing 1 to 1 of 1 entries			

6.10. Device Group Map

The interface facilitates group creation by administrators, who can then add specific devices to each group for easy identification and management. This setup allows administrators to assign users to these groups, simplifying the process of device mapping and user assignment. As a result, administrators can efficiently organize and oversee device allocations while maintaining clarity regarding user-group associations.

7. Administration

7.1. User Role

The roles and permissions matrix are a document outlining roles within an organization and their associated permissions. It assigns roles and permissions to users, defines access levels, and restricts access to sensitive information. Mandatory fields include Role Name and Role Description.

Privileges are checked based on the modules where permission is desired. For instance, if "Master" is checked, rights are granted in the master module, allowing access to features like company and department management. If only adding masters is desired, the "Add" option is checked, and similar options exist for editing and deleting permissions. This ensures users have access only to necessary information for their duties.

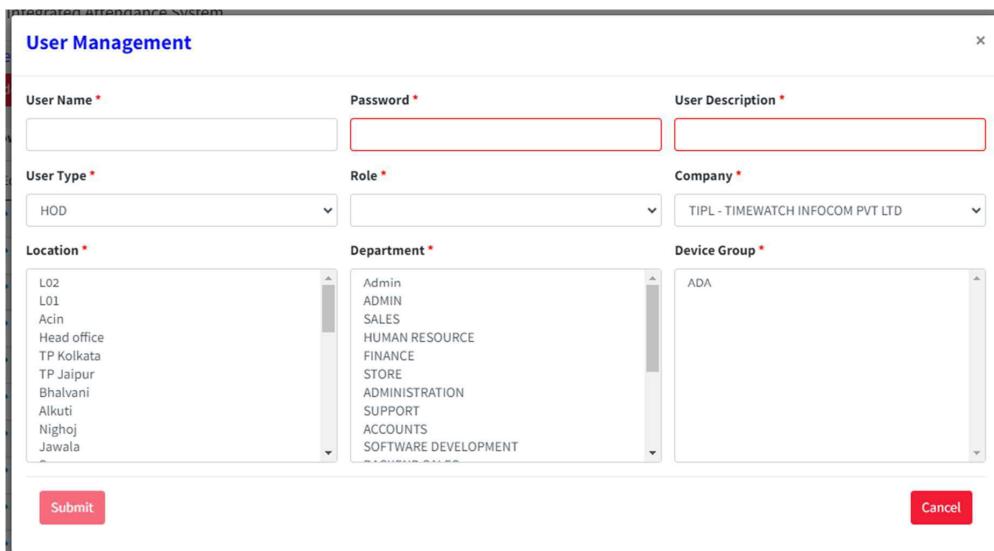

The screenshot shows the 'User Role' section of the Integrated Attendance System. It includes a table with columns for Role Name and Role Description, and a grid of checkboxes for various privileges under categories like Master, Admin, Operations, Data Process, Reports, Device Management, and Leave Management.

7.2. User Management

The User Management interface serves to manage user types and roles, assigning specific roles and types to individual users with varying access rights. Users can be associated with different roles and types, each granting distinct access privileges.

Additionally, administrators can select location and department types to provide further access rights. Access rights are granted based on these selections, with only the relevant details beyond access rights being displayed, ensuring clarity and efficiency in managing user access permissions.

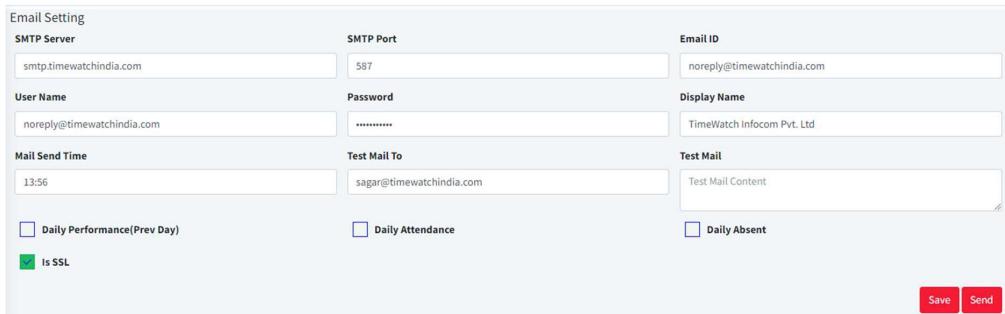

The screenshot shows the 'User Management' dialog box. It contains fields for User Name, Password, User Description, User Type (set to HOD), Role (set to Admin), Company (set to TIPL - TIMEWATCH INFOCOM PVT LTD), Location (dropdown menu listing locations like L02, L01, Acin, Head office, TP Kolkata, TP Jaipur, Bhalvani, Alkuti, Nighoj, Jawala), Department (dropdown menu listing departments like Admin, ADMIN, SALES, HUMAN RESOURCE, FINANCE, STORE, ADMINISTRATION, SUPPORT, ACCOUNTS, SOFTWARE DEVELOPMENT), and Device Group (dropdown menu listing ADA). At the bottom are 'Submit' and 'Cancel' buttons.

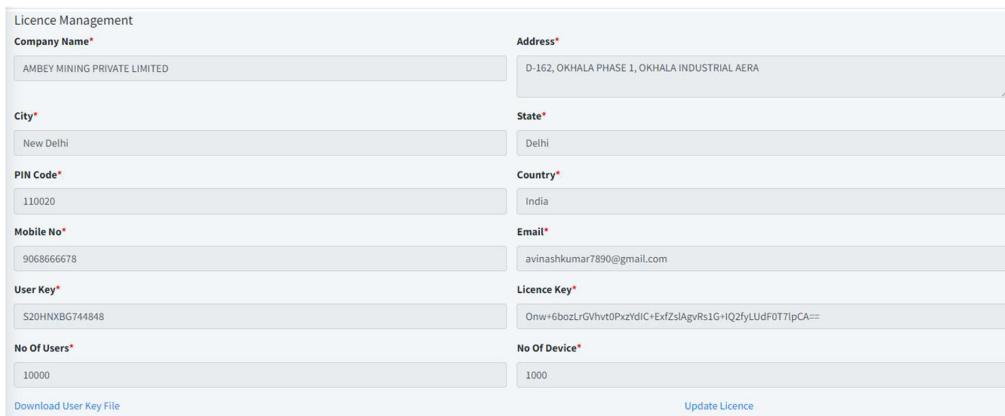

7.3. Email Setting

In the Email Settings section of this interface, administrators can configure automatic email sending at predefined time intervals. They can specify the reports or notifications that should be automatically sent out on a regular basis. This automation ensures that important reports and notifications are delivered consistently and promptly, enhancing communication and facilitating timely decision-making within the organization.

7.4. Licence Management

The License Management interface is a versatile tool that supports various functions, including upgrading existing licenses to accommodate new tools or modules, increasing employee capacity, and integrating additional modules like canteen and payroll. These upgrades ensure that organizations have the necessary permissions and capabilities to operate efficiently within their software ecosystem, empowering them to meet their evolving needs and goals.

7.5. Parallel DB

Parallel DB likely refers to a Parallel Database Management System (DBMS), a type of database management system designed to process large volumes of data in parallel across multiple servers. With redundant hardware and data replication techniques, Parallel DBMS can ensure high availability and fault tolerance, minimizing downtime and data loss.

Parallel DB

Parallel Database Setup

8. Reports

Admin can access reports on a daily or monthly basis and apply filters based on various criteria such as company, location, department, designation, grade, or individual employees and also download in excel format for physical form. This flexibility enables users to generate customized reports tailored to their specific needs, providing insights into different aspects of the organization's operations.
